

Clean Air Anywhere

Facility Air Sterilization

- Dual filtration ability.
- Primary Lysozyme purification is an enzymatic hydrolysis process which is a strong broad-spectrum fungicide that dissolves cell walls in bacteria, mold, and viruses.
- Secondary HEPA purification process the filtration efficacy for particles 0.3/ μ m resulting in a 99.97% filtration rate.
- Air purification via molecular DNA destruction NOT merely HEPA filtering
- Variety of sizes including; ceiling mount, wall mount, and three movable type appliances (large screen style shown above).
