

Flower Transformation

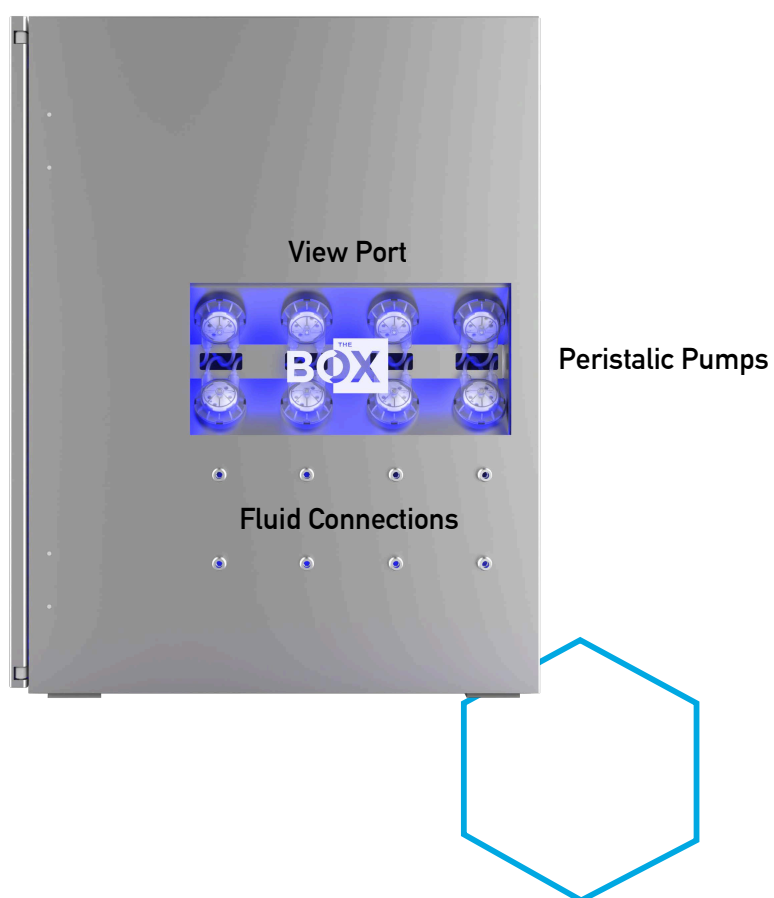

Reveal Your Flower's True Potential

TheBOX® is an organic yet powerful, vacuum-induced sterilization technology for the sterilization of dried cannabis and hemp flower **which** penetrates without damage to the very core. The byproducts of Reactive Oxygen (rO) is merely water and oxygen. Our process does not impact the original properties of cannabis and hemp such as THC, CBD or Terpenes during the full-spectrum microbial decontamination process via DNA destruction of pathogens.

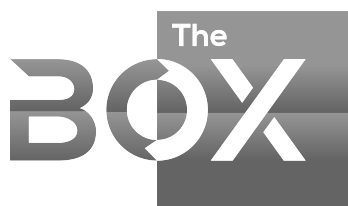

In addition to sterilization, operators can adjust hydration levels by re-introducing moisture to dried out flower, recovering flower moisture, color and brighting compromised terpene profiles.
